Site Support and Resource

About Us

Whitepack Network Services is a leading structured cabling installation provider that can operate transparently on behalf of organisations as a subcontractor. The Company was formed to undertake complete site installations and has been successfully satisfying customers since 1997.

Managed Service

Whitepack has offices in London, Hertfordshire, Somerset and Wales, with engineers strategically located nationwide. This enables us to provide a fully managed national service on a local basis whilst consistently delivering the highest quality standards of work.

An experienced Project Manager is assigned to every deployment with responsibility for organising all resources and liaising with clients, keeping them fully informed of progress from start to finish and ensuring that target milestones are met.

Service Partners

Once you have contracted Whitepack to undertake a project on your behalf we bear the burden of risk to meet the deadline within the time frame and cost quoted.

We provide:

- Reliable, Experienced Resource - Competent engineers with the relevant skills to suit your requirements.
- An Experienced Managed Team of Engineers - For complete installations of every size from start to finish, we provide reassurance that the job will be completed to specification on time to meet client expectations.
- Your Representatives on Site - All our staff are briefed on "who's who", escalation of site issues and how best to represent your company whilst on site. In addition, they know that whilst they wear your company ID, they will meet all expected corporate standards.

Services

Whitepack Network Services provides a comprehensive range of tailored IT infrastructure services such as:

- Structured Cabling Installations - Copper / Fibre Optic / Voice cabling
- Structured Cabling deployments across multiple site roll outs
- Moves Adds & Changes resource support
- Infrastructure Health check services
- Wireless Cabling Installations
- Audio Visual / Interactive Solutions

Structured Cabling Installations

Whitepack Network Services has successfully provided clients with structured cabling installations across the UK and Europe ranging from 1 to 30,000 information outlets. We have built a healthy and enviable reputation for delivering fast track large installations, on time, within budget and to the highest standards.

Whitepack Network Services also specialises in fibre optic deployments including OM1, OM2, OM3 and OM4 multi-mode cables, and long haul OS1 & OS2 single mode cables along with all termination types.

Installation Work on Price

Whitepack can provide a fixed price service for most installations with a specification and site plans. If the environment is difficult, we prefer to do a site survey to provide you with an accurate cost.

Costs are calculated per cable installed/terminated and tested. This is dependent on the quantity, length, environment, containment, false floor or ceilings, site access and proposed cabling system to be installed.

Working Overseas

Whitepack has vast experience in deploying teams of engineers to work abroad delivering structured cabling installation projects; we can ensure your installation is delivered on time and within budget to the highest quality standards. This service offers clients peace of mind that their structured cabling installations run as smoothly as they would in the UK.

An Expert Resource

Our engineers undertake regular training programmes and courses.

Structured Cabling Installation Training Courses

- Systimax Installation & Maintenance Course
- Brand Rex Copper Cable Technician Course
- Brand Rex System Design Engineer Course
- TE Connectivity Structured Cabling Technician Course
- Excel Copper Cable Technician Course
- Nexans Copper Supervisors Course
- BTEC Fibre Optics Internal and External Course
- Corning Fibre Optic Course
- R&M Copper Technician Course
